CARMUNICATION – the open and neutral platform for modern mobility services

On March 14th the members of the CARMUNICATION association gathered highly motivated for their first membership meeting in Vienna.

For many companies open access to live in vehicle data is of outmost importance for their future. This is exactly the reason, why the nonprofit association CARMUNICATION was founded.

Exclusively the car owner decides **who** is authorized to have access to the data of his car and **what purpose** the authorization is granted for. If someone prefers an insurance model depending on the kilometers travelled, his or her agreement to data transfer via the CARMUNICATION platform will become subject of his or her insurance treaty. This can be easily managed by using an APP.

Suppliers of **automotive dealer management systems** play an important role in providing those live in vehicle data to the garage process. In the different DMS systems the information about failures having occurred in the vehicle or about necessary service checks should be handled in a way that enables the garages to inform their customers accordingly.

EVERY interest group is represented by a chairman being responsible for his specific branch. The **spare parts trade** will need information about the spare parts to be delivered to the garages within a very short period of time.. Mr. Simon Kendall of the SAG Group (ATR member) will fulfill this task for the trading companies. The trading cooperation TEMOT INTERNATIONAL is also a member of the CARMUNICATION association; From Autodistribution International the BIRNER GmbH is founding member of CARMUNICATION like Hans Hess Autoteile GmbH and Atlas Tech GmbH (x2x IoT Platform Provider www.atlastech.de). Negotiations with Group Auto International and Nexus are going to take place.

OPEN for EVERYONE

Every potential commercial data user can become a member by paying an annual fee of Euro 10.000, - thus being authorized to have access to automotive data on the CARMUNICATION platform that is already installed: Spare parts manufacturers, leasing enterprises, break down assistance, e-mobility operators, charging stations, parking garage operators, carsharing, OE garages, independent garages, diagnosis system providers, IT services, vehicle fleet managers,
interest groups, vehicle manufacturers and many more.

In order to emphasize even more the openness towards everyone, the membership assembly decided to install an additional INFORMATION MEMBERSHIP (€ 1.000,- per year). Thus one is granted full access to the CARMUNICATION information, but is excluded from data access and from the right to vote at the membership assembly.

CERTIFICATION

High standards and severe safety regulations are top priority of CARMUNICATION !

We submit to an accurate certification process in order to guarantee not only the safety of all data coming from the vehicle but also the personal data protection of the car owner himself.

„We will be a most reliable partner for the automotive industry", underlines chairman Walter Birner.

DIRECT ACCESS to the „ LIVE IN – VEHICLE DATA"

CARMUNICATION supports the intentions of all interest groups united in the AFCAR (the Alliance for the Freedom of Car Repair in the EU) that engage for a free access to the data generated in the vehicles without depending on the vehicle manufacturers. Pay attention to the video clip on https://www.figiefa.eu/ecall-telematics/.

It is rather simple to register for a membership at CARMUNICATION. If you are interested in CARMUNICATION please send an email to anmeldung@carmunication.eu.

CARMUNICATION – Association providing automotive data.
